ABOUT ME

Software Engineer with 5+ years of experience building backend systems.

I focus on developer tooling, automation, and modernization of legacy services through incremental refactoring and testing. I approach platform work as a product, designing solutions that improve developer experience, support business teams, and reduce operational costs.

Based in Belgrade, Serbia.

EXPERIENCE

Software Developer at JetBrains

February 2026 – Present

Working on licensing and user data management systems.

Senior Kotlin Software Engineer at Holland and Barrett

January 2024 – February 2026

Leading health and wellness retailer with 1,300+ stores across 16 countries.

- Built internal IAM platform with SDK for developers, enabling faster service deployment without implementing custom security solutions.
- Designed and owned 3 internal services (HR portal, A/B testing and Tracking platforms), replacing vendor solutions and eliminating licensing costs.
- Established development standards and maintained shared component library, improving code consistency and team productivity across projects.

Senior Software Engineer at Tradeshift (via Setronica)

August 2022 – January 2024

Product catalog core team member for B2B e-commerce platform serving 1.5M suppliers globally.

- Fixed critical product catalog import issues in B2B marketplace, preventing loss of 2 key partner contracts.
- Unblocked legacy service development by adding comprehensive test coverage and refactoring core modules.
- Mentored 8 developers transitioning to Java, addressing critical talent gaps and accelerating project delivery.

Senior Kotlin Software Engineer at Beeline

April 2022 – August 2022

Leading telecom operator in CIS region serving 28.5M+ customers.

- Built centralized user data repository from scratch, designing migration pipelines for millions of legacy records and resolving data conflicts.
- Introduced CI/CD pipelines and automated testing, reducing deployment cycle from weeks to same-day releases.
- Redesigned distributed monolith architecture, decreasing feature time-to-market by 25%.

Kotlin Software Engineer at Domclick

December 2020 – April 2022

Digital real estate platform with 15.6M+ monthly users and $135M+ annual turnover.

- Designed pledge property and mortgage services, increasing product revenues by 6%.
- Saved developers 1 hour/day by automating Gradle builds.

EDUCATION

BSc (Honours) Computing and IT at The Open University
May 2025 – Present
BCS/EuroInf-accredited program combining theoretical computer science foundations with practical software development and IT management skills.

Computer Science at Ecole 42 Moscow Campus
December 2019 – January 2021
Intensive peer-to-peer programming bootcamp focused on C/C++, algorithms, and system programming.

TECHNICAL SKILLS

Backend Development: Kotlin, Java, Spring Boot, Ktor, REST APIs, gRPC

Persistence: PostgreSQL, Hibernate, jOOQ, Liquibase, Flyway

Testing: JUnit, Kotest, TestContainers

Messaging: Kafka, RabbitMQ

DevOps: Docker, Kubernetes, AWS, CI/CD, Gradle

Observability: Datadog, Grafana, Prometheus, ELK
